

JSL Assessment Question Bank

Complete Reference Guide — All Questions and Answers

This guide contains **150 questions** across **6 assessment sets**, covering company overview topics and the stainless steel manufacturing process. Each question is shown with its type, full answer choices (where applicable), the correct answer, and a short explanation.

Assessment Set	Number of Questions
Company Overview - Set 1	25
Company Overview - Set 2	25
Company Overview - Set 3	25
Manufacturing Journey - Set 1	25
Manufacturing Journey - Set 2	25
Manufacturing Journey - Set 3	25
Total	150

How This Guide Is Organized

Each of the 150 questions below is labeled with its question type: **Multiple Choice Question** (choose one correct option from a list), **True / False Question** (decide whether the statement is correct), or **Short Answer Question** (write a brief response, with a model answer and key points provided). The correct answer for every question is clearly marked in green, and a short explanation follows to clarify the reasoning.

Company Overview - Set 1

Question 1

Multiple Choice Question

What is the primary business of Jindal Stainless Limited?

- A. Automobile Manufacturing
- B. Stainless Steel Manufacturing ✓
- C. Power Generation
- D. Cement Manufacturing

Correct Answer: Stainless Steel Manufacturing

Explanation: JSL specializes in manufacturing stainless steel products.

Question 2

Multiple Choice Question

Which of the following best describes JSL?

- A. Pharmaceutical Company
- B. Information Technology Company
- C. Stainless Steel Manufacturer ✓
- D. Construction Company

Correct Answer: Stainless Steel Manufacturer

Explanation: JSL is India's leading stainless steel manufacturer.

Question 3

Multiple Choice Question

Which department is primarily responsible for producing stainless steel?

- A. Human Resources
- B. Manufacturing ✓
- C. Finance
- D. Marketing

Correct Answer: Manufacturing

Explanation: The Manufacturing department carries out steel production.

Question 4

Multiple Choice Question

Which document helps employees understand company policies and procedures?

- A. Employee Handbook ✓
- B. Purchase Order
- C. Invoice
- D. Delivery Challan

Correct Answer: Employee Handbook

Explanation: The Employee Handbook provides company policies and guidelines.

Question 5

Multiple Choice Question

Why are company values important?

- A. They increase machine speed.
- B. They guide employee behaviour and decision making. ✓
- C. They reduce electricity consumption.
- D. They replace safety procedures.

Correct Answer: They guide employee behaviour and decision making.

Explanation: Company values define workplace culture and ethics.

Question 6

True / False Question

Every employee is responsible for workplace safety.

Correct Answer: True

Explanation: Safety is a shared responsibility across the organization.

Question 7

True / False Question

Quality inspection is only performed after dispatch.

Correct Answer: False

Explanation: Quality checks occur throughout the manufacturing process.

Question 8

True / False Question

Following company policies helps maintain discipline and consistency.

Correct Answer: True

Explanation: Policies ensure standard practices across the organization.

Question 9

Multiple Choice Question

Which of the following is an important objective of employee onboarding?

- A. Increase production immediately
- B. Introduce employees to the company and workplace ✓
- C. Assign permanent leadership roles
- D. Replace technical training

Correct Answer: Introduce employees to the company and workplace

Explanation: Onboarding familiarizes employees with the organization.

Question 10

Multiple Choice Question

Which of the following best represents a professional workplace behaviour?

- A. Ignoring safety rules
- B. Following company policies ✓

- C. Skipping documentation
- D. Avoiding teamwork

Correct Answer: Following company policies

Explanation: Professional behaviour includes compliance with organizational rules.

Question 11

Short Answer Question

What is the primary business of JSL?

Model Answer: JSL is a stainless steel manufacturing company.

Key points to include: stainless steel, manufacturer, manufacturing

Question 12

Short Answer Question

Name any two responsibilities of an employee regarding workplace safety.

Model Answer: Wear PPE, follow safety procedures, report unsafe conditions.

Key points to include: PPE, report hazards, follow SOP, safety

Question 13

Multiple Choice Question

Why are certifications important for a manufacturing company?

- A. They decorate office walls.
- B. They demonstrate compliance with quality standards. ✓
- C. They reduce production time automatically.
- D. They replace inspections.

Correct Answer: They demonstrate compliance with quality standards.

Explanation: Certifications show adherence to recognized industry standards.

Question 14

Multiple Choice Question

Which department primarily manages employee recruitment and training?

- A. Finance
- B. Human Resources ✓
- C. Quality
- D. Production

Correct Answer: Human Resources

Explanation: The HR department manages recruitment, onboarding, training, and employee development.

Question 15

Multiple Choice Question

Which of the following is NOT considered a core objective of JSL?

- A. Customer Satisfaction
- B. Quality Excellence
- C. Ignoring Safety ✓

D. Continuous Improvement

Correct Answer: Ignoring Safety

Explanation: Safety is one of the highest priorities in manufacturing.

Question 16

Multiple Choice Question

What is the purpose of employee onboarding?

- A. Assign salaries
- B. Introduce employees to the organization and work culture ✓
- C. Replace technical training
- D. Conduct annual performance reviews

Correct Answer: Introduce employees to the organization and work culture

Explanation: Onboarding familiarizes employees with the company, policies, and workplace.

Question 17

True / False Question

Employees should report unsafe conditions immediately.

Correct Answer: True

Explanation: Reporting hazards helps prevent accidents.

Question 18

True / False Question

Company values only apply to senior management.

Correct Answer: False

Explanation: Company values apply to every employee.

Question 19

Multiple Choice Question

Why is teamwork important in an organization?

- A. It increases confusion.
- B. It improves collaboration and productivity. ✓
- C. It replaces management.
- D. It eliminates documentation.

Correct Answer: It improves collaboration and productivity.

Explanation: Effective teamwork helps departments achieve common organizational goals.

Question 20

Multiple Choice Question

Which document usually confirms that products meet required quality standards?

- A. Attendance Register
- B. Quality Certificate ✓
- C. Salary Slip
- D. Leave Form

Correct Answer: Quality Certificate

Explanation: Quality certificates verify that products meet specified standards.

Question 21

Short Answer Question

Why is workplace safety important?

Model Answer: Workplace safety prevents accidents, protects employees, and ensures safe operations.

Key points to include: prevent accidents, protect employees, safe workplace, injuries

Question 22

Short Answer Question

What is the purpose of company values?

Model Answer: Company values guide employee behaviour, ethics, and decision making.

Key points to include: ethics, culture, behaviour, decision making

Question 23

Short Answer Question

Name any two departments found in a manufacturing organization.

Model Answer: Examples include Manufacturing, HR, Finance, Quality, IT, Maintenance, and Procurement.

Key points to include: HR, Finance, Manufacturing, Quality, IT, Maintenance, Procurement

Question 24

Short Answer Question

Why are quality standards important in manufacturing?

Model Answer: Quality standards ensure products consistently meet customer and industry requirements.

Key points to include: customer satisfaction, quality, consistency, standards

Question 25

Multiple Choice Question

Which statement best represents JSL's workplace culture?

- A. Safety can be ignored if production is high.
- B. Quality, Safety, Integrity, and Continuous Improvement are important. ✓
- C. Documentation is optional.
- D. Only managers are responsible for quality.

Correct Answer: Quality, Safety, Integrity, and Continuous Improvement are important.

Explanation: JSL emphasizes quality, safety, ethics, teamwork, and continuous improvement.

Company Overview - Set 2

Question 1

Multiple Choice Question

What does JSL primarily manufacture?

- A. Aluminium
- B. Copper
- C. Stainless Steel ✓
- D. Plastic

Correct Answer: Stainless Steel

Explanation: JSL is a stainless steel manufacturing company.

Question 2

Multiple Choice Question

Which factor contributes most to customer satisfaction?

- A. Poor communication
- B. Consistent product quality ✓
- C. Ignoring feedback
- D. Late delivery

Correct Answer: Consistent product quality

Explanation: Quality products improve customer satisfaction.

Question 3

Multiple Choice Question

Which department is responsible for employee welfare?

- A. HR ✓
- B. Production
- C. Quality
- D. Dispatch

Correct Answer: HR

Explanation: Human Resources manages employee welfare.

Question 4

Multiple Choice Question

Which of these best describes workplace ethics?

- A. Ignoring company rules
- B. Honest and responsible behaviour ✓
- C. Avoiding teamwork
- D. Working without documentation

Correct Answer: Honest and responsible behaviour

Explanation: Ethics involve honesty, responsibility and integrity.

Question 5

Multiple Choice Question

Continuous improvement mainly focuses on:

- A. Stopping innovation
- B. Improving processes regularly ✓
- C. Reducing documentation
- D. Ignoring customer feedback

Correct Answer: Improving processes regularly

Explanation: Continuous improvement is an ongoing effort to improve products and processes.

Question 6

Multiple Choice Question

Why are company policies important?

- A. To create confusion
- B. To provide consistent guidelines ✓
- C. To reduce quality
- D. To avoid responsibility

Correct Answer: To provide consistent guidelines

Explanation: Policies help employees follow standard procedures.

Question 7

Multiple Choice Question

Which of the following best represents teamwork?

- A. Working alone
- B. Departments collaborating to achieve common goals ✓
- C. Ignoring communication
- D. Avoiding meetings

Correct Answer: Departments collaborating to achieve common goals

Explanation: Teamwork improves efficiency and productivity.

Question 8

Multiple Choice Question

Which document introduces new employees to company rules?

- A. Employee Handbook ✓
- B. Invoice
- C. Packing List
- D. Purchase Order

Correct Answer: Employee Handbook

Explanation: The handbook explains company policies and procedures.

Question 9

Multiple Choice Question

Which of these supports a positive workplace culture?

- A. Ignoring safety
- B. Respect and teamwork ✓
- C. Poor communication
- D. Breaking SOPs

Correct Answer: Respect and teamwork

Explanation: Respectful collaboration strengthens workplace culture.

Question 10

Multiple Choice Question

Which area is most important during employee onboarding?

- A. Lottery allocation
- B. Company introduction and workplace orientation ✓
- C. Annual bonus calculation
- D. Stock market training

Correct Answer: Company introduction and workplace orientation

Explanation: Onboarding familiarizes employees with the organization.

Question 11

True / False Question

Safety rules should be followed only inside production areas.

Correct Answer: False

Explanation: Safety applies across the entire workplace.

Question 12

True / False Question

Quality is everyone's responsibility.

Correct Answer: True

Explanation: Every employee contributes to quality.

Question 13

True / False Question

Ignoring SOPs can increase operational risks.

Correct Answer: True

Explanation: Standard procedures reduce errors and accidents.

Question 14

True / False Question

Company values are only relevant for senior management.

Correct Answer: False

Explanation: Values apply to every employee.

Question 15

True / False Question

Customer satisfaction is an important business objective.

Correct Answer: True

Explanation: Meeting customer expectations is a key goal.

Question 16

Short Answer Question

Why is teamwork important in an organization?

Model Answer: Teamwork improves collaboration, communication and productivity.

Key points to include: collaboration, productivity, coordination, communication

Question 17

Short Answer Question

Name two company values that employees should follow.

Model Answer: Examples include Integrity, Safety, Quality, Respect and Teamwork.

Key points to include: integrity, quality, safety, teamwork, respect

Question 18

Short Answer Question

Why is quality important for customers?

Model Answer: Quality ensures reliable products and improves customer satisfaction.

Key points to include: customer satisfaction, reliability, consistency

Question 19

Short Answer Question

What is the purpose of employee onboarding?

Model Answer: It helps employees understand the company, workplace and policies.

Key points to include: orientation, training, company, introduction

Question 20

Short Answer Question

Name any two major departments in a manufacturing company.

Model Answer: Manufacturing and HR are examples.

Key points to include: HR, Finance, Manufacturing, Quality, IT, Maintenance

Question 21

Multiple Choice Question

Which department ensures products meet specifications?

- A. Quality ✓
- B. Accounts
- C. HR
- D. Administration

Correct Answer: Quality

Explanation: Quality departments inspect and verify products.

Question 22

Multiple Choice Question

Why are certifications valuable for a manufacturing company?

- A. They replace inspections.
- B. They demonstrate compliance with recognized standards. ✓
- C. They eliminate quality checks.
- D. They reduce production automatically.

Correct Answer: They demonstrate compliance with recognized standards.

Explanation: Certifications build customer confidence.

Question 23

Multiple Choice Question

Which behaviour should every employee demonstrate?

- A. Professionalism ✓
- B. Negligence
- C. Carelessness
- D. Ignoring procedures

Correct Answer: Professionalism

Explanation: Professional behaviour supports organizational success.

Question 24

Multiple Choice Question

What is one benefit of following Standard Operating Procedures (SOPs)?

- A. Reduced consistency
- B. Improved safety and quality ✓
- C. More operational errors
- D. Lower accountability

Correct Answer: Improved safety and quality

Explanation: SOPs help standardize work and reduce errors.

Question 25

Multiple Choice Question

What should an employee do after noticing an unsafe condition?

- A. Ignore it
- B. Report it immediately ✓
- C. Wait for someone else
- D. Continue working without informing anyone

Correct Answer: Report it immediately

Explanation: Unsafe conditions should always be reported promptly.

Company Overview - Set 3

Question 1

Multiple Choice Question

What is the main objective of JSL?

- A. Manufacture stainless steel products ✓
- B. Produce electrical equipment
- C. Manufacture automobiles
- D. Build residential buildings

Correct Answer: Manufacture stainless steel products

Explanation: JSL is one of India's leading stainless steel manufacturers.

Question 2

Multiple Choice Question

Which department is responsible for ensuring product quality?

- A. Finance
- B. Human Resources
- C. Quality ✓
- D. Administration

Correct Answer: Quality

Explanation: The Quality department ensures products meet required specifications.

Question 3

Multiple Choice Question

Which document provides employees with company policies and procedures?

- A. Employee Handbook ✓
- B. Invoice
- C. Purchase Order
- D. Salary Slip

Correct Answer: Employee Handbook

Explanation: The Employee Handbook contains company policies and workplace guidelines.

Question 4

Multiple Choice Question

Which value encourages employees to act honestly and ethically?

- A. Integrity ✓
- B. Delay
- C. Negligence
- D. Competition

Correct Answer: Integrity

Explanation: Integrity promotes honesty, transparency, and ethical behaviour.

Question 5

Multiple Choice Question

Why is continuous improvement important?

- A. It increases operational efficiency. ✓
- B. It eliminates teamwork.
- C. It removes safety procedures.
- D. It reduces communication.

Correct Answer: It increases operational efficiency.

Explanation: Continuous improvement helps improve processes, products, and productivity.

Question 6

Multiple Choice Question

Which activity should every employee participate in?

- A. Safety Training ✓
- B. Ignoring SOPs
- C. Avoiding documentation
- D. Skipping inspections

Correct Answer: Safety Training

Explanation: Safety training prepares employees to work safely.

Question 7

Multiple Choice Question

Professional workplace behaviour includes:

- A. Following company policies ✓
- B. Ignoring supervisors
- C. Skipping documentation
- D. Avoiding teamwork

Correct Answer: Following company policies

Explanation: Professional employees follow workplace rules and standards.

Question 8

Multiple Choice Question

Which factor improves customer trust?

- A. Consistent quality ✓
- B. Late deliveries
- C. Poor communication
- D. Ignoring complaints

Correct Answer: Consistent quality

Explanation: Reliable product quality builds customer confidence.

Question 9

Multiple Choice Question

What is one purpose of company certifications?

- A. Show compliance with standards ✓
- B. Increase office decoration
- C. Reduce meetings
- D. Replace inspections

Correct Answer: Show compliance with standards

Explanation: Certifications demonstrate compliance with recognized quality standards.

Question 10

Multiple Choice Question

Employees should report unsafe conditions to:

- A. Their supervisor ✓
- B. No one
- C. Customers
- D. Visitors

Correct Answer: Their supervisor

Explanation: Unsafe conditions should be reported immediately.

Question 11

True / False Question

Safety is the responsibility of every employee.

Correct Answer: True

Explanation: Every employee contributes to workplace safety.

Question 12

True / False Question

Quality checks are performed only after dispatch.

Correct Answer: False

Explanation: Quality inspections are carried out throughout production.

Question 13

True / False Question

Following SOPs reduces operational errors.

Correct Answer: True

Explanation: Standard Operating Procedures improve consistency.

Question 14

True / False Question

Employees may ignore PPE if they are experienced.

Correct Answer: False

Explanation: PPE is mandatory regardless of experience.

Question 15

True / False Question

Customer satisfaction is important for business success.

Correct Answer: True

Explanation: Satisfied customers help maintain long-term business growth.

Question 16

Short Answer Question

What is the primary business of JSL?

Model Answer: JSL manufactures stainless steel products.

Key points to include: stainless steel, manufacturing, manufacturer

Question 17

Short Answer Question

Why are Standard Operating Procedures important?

Model Answer: SOPs ensure consistent, safe, and standardized work practices.

Key points to include: consistency, quality, safety, procedure

Question 18

Short Answer Question

Name any two employee responsibilities related to safety.

Model Answer: Wear PPE and report unsafe conditions.

Key points to include: PPE, report hazards, follow SOP, training

Question 19

Short Answer Question

Why is teamwork important in manufacturing?

Model Answer: Teamwork improves coordination, productivity, and communication.

Key points to include: coordination, communication, productivity, collaboration

Question 20

Short Answer Question

Name two departments commonly found in manufacturing companies.

Model Answer: Examples include Production, HR, Finance, Quality, and IT.

Key points to include: HR, Quality, Production, Finance, IT

Question 21

Multiple Choice Question

Which department generally manages employee training?

- A. HR ✓
- B. Warehouse
- C. Dispatch
- D. Production

Correct Answer: HR

Explanation: HR organizes employee development and training.

Question 22

Multiple Choice Question

Which of the following improves workplace communication?

- A. Respectful collaboration ✓
- B. Ignoring team members
- C. Skipping meetings
- D. Poor documentation

Correct Answer: Respectful collaboration

Explanation: Good communication improves organizational performance.

Question 23

Multiple Choice Question

Why should employees follow company policies?

- A. To maintain consistency and discipline ✓
- B. To reduce teamwork
- C. To avoid communication
- D. To eliminate documentation

Correct Answer: To maintain consistency and discipline

Explanation: Policies provide a common framework for all employees.

Question 24

Multiple Choice Question

Which factor contributes to operational excellence?

- A. Continuous improvement ✓
- B. Ignoring feedback
- C. Avoiding inspections
- D. Breaking SOPs

Correct Answer: Continuous improvement

Explanation: Improvement initiatives increase efficiency and quality.

Question 25

Multiple Choice Question

Which statement best represents JSL's workplace philosophy?

- A. Safety, Quality, Integrity and Continuous Improvement ✓
- B. Production over Safety
- C. Documentation is optional
- D. Only managers ensure quality

Correct Answer: Safety, Quality, Integrity and Continuous Improvement

Explanation: These principles represent a strong manufacturing culture.

Manufacturing Journey - Set 1

Question 1

Multiple Choice Question

Which process marks the beginning of stainless steel manufacturing?

- A. Hot Rolling
- B. Raw Material Procurement ✓
- C. Grinding
- D. Dispatch

Correct Answer: Raw Material Procurement

Explanation: Manufacturing begins with procuring the required raw materials.

Question 2

Multiple Choice Question

Which material is the primary metallic charge in an Electric Arc Furnace?

- A. Plastic
- B. Stainless Steel Scrap ✓
- C. Wood
- D. Concrete

Correct Answer: Stainless Steel Scrap

Explanation: Scrap forms the major metallic input for the EAF.

Question 3

Multiple Choice Question

What is the primary function of the Scrap Yard?

- A. Packaging finished goods
- B. Segregating and preparing scrap ✓
- C. Testing products
- D. Dispatching coils

Correct Answer: Segregating and preparing scrap

Explanation: The Scrap Yard inspects, segregates and prepares scrap before melting.

Question 4

Multiple Choice Question

Which furnace is mainly responsible for melting scrap?

- A. LRF
- B. AOD
- C. Electric Arc Furnace ✓
- D. Annealing Furnace

Correct Answer: Electric Arc Furnace

Explanation: The Electric Arc Furnace melts the scrap using electrical energy.

Question 5

Multiple Choice Question

What is the main purpose of the AOD process?

- A. Packaging
- B. Reduce carbon while preserving chromium ✓
- C. Store finished products
- D. Cool coils

Correct Answer: Reduce carbon while preserving chromium

Explanation: AOD refines stainless steel by removing carbon efficiently.

Question 6

Multiple Choice Question

Which unit performs secondary refining of molten steel?

- A. CCM
- B. LRF ✓
- C. Warehouse
- D. Grinding Line

Correct Answer: LRF

Explanation: The Ladle Refining Furnace improves steel quality before casting.

Question 7

Multiple Choice Question

CCM stands for:

- A. Continuous Casting Machine ✓
- B. Central Coil Machine
- C. Cold Casting Method
- D. Casting Control Module

Correct Answer: Continuous Casting Machine

Explanation: CCM converts molten steel into slabs.

Question 8

Multiple Choice Question

What is produced by the Continuous Casting Machine?

- A. Finished Pipes
- B. Steel Slabs ✓
- C. Bolts
- D. Steel Powder

Correct Answer: Steel Slabs

Explanation: The CCM continuously casts molten steel into slabs.

Question 9

Multiple Choice Question

Which process follows Continuous Casting?

- A. Dispatch
- B. Hot Rolling ✓
- C. Grinding
- D. Warehouse

Correct Answer: Hot Rolling

Explanation: Slabs are reheated and rolled during Hot Rolling.

Question 10

Multiple Choice Question

Why is Cold Rolling performed?

- A. Increase thickness
- B. Improve surface finish and dimensional accuracy ✓
- C. Store coils
- D. Remove packaging

Correct Answer: Improve surface finish and dimensional accuracy

Explanation: Cold Rolling improves finish, strength and precision.

Question 11

True / False Question

EAF uses electrical energy for melting.

Correct Answer: True

Explanation: Electric arcs generated by graphite electrodes melt the scrap.

Question 12

True / False Question

Annealing increases hardness by cold working.

Correct Answer: False

Explanation: Annealing softens the material and restores ductility.

Question 13

True / False Question

Pickling removes oxide scale from the steel surface.

Correct Answer: True

Explanation: Pickling uses acid treatment to clean the surface.

Question 14

True / False Question

Grinding is performed after Pickling to improve the surface finish.

Correct Answer: True

Explanation: Grinding and finishing enhance surface quality before final inspection.

Question 15

True / False Question

Dispatch is the first step of the manufacturing process.

Correct Answer: False

Explanation: Dispatch is the final stage after production and quality inspection.

Question 16

Short Answer Question

What is the primary purpose of the Electric Arc Furnace (EAF)?

Model Answer: The EAF melts stainless steel scrap and alloy materials to produce molten steel.

Key points to include: melting, scrap, molten steel, electric arc

Question 17

Short Answer Question

Why is Argon Oxygen Decarburization (AOD) important in stainless steel manufacturing?

Model Answer: AOD reduces carbon while preserving chromium and refining the molten steel.

Key points to include: carbon, chromium, refining, AOD

Question 18

Short Answer Question

What is the function of the Continuous Casting Machine (CCM)?

Model Answer: The CCM converts molten steel into continuously cast steel slabs.

Key points to include: continuous casting, slabs, solidification, molten steel

Question 19

Short Answer Question

Why is Annealing performed after Cold Rolling?

Model Answer: Annealing restores ductility, relieves internal stresses and improves formability.

Key points to include: ductility, stress relief, soften, heat treatment

Question 20

Short Answer Question

Name any two quality checks performed during manufacturing.

Model Answer: Examples include chemical analysis, thickness measurement, hardness testing and surface inspection.

Key points to include: chemical analysis, temperature, surface inspection, thickness, hardness

Question 21

Multiple Choice Question

Which process removes oxide scale formed during heat treatment?

- A. Cold Rolling
- B. Grinding
- C. Pickling ✓
- D. Dispatch

Correct Answer: Pickling

Explanation: Pickling removes oxide scales using controlled acid treatment.

Question 22

Multiple Choice Question

Which department performs the final inspection before products are stored or dispatched?

- A. Quality ✓
- B. Finance
- C. HR
- D. Administration

Correct Answer: Quality

Explanation: The Quality department verifies that products meet specifications.

Question 23

Multiple Choice Question

What is one major objective of warehouse operations?

- A. Melting scrap
- B. Maintaining inventory and storing finished products safely ✓
- C. Performing annealing
- D. Reducing slab thickness

Correct Answer: Maintaining inventory and storing finished products safely

Explanation: Warehouses store, track and issue materials efficiently.

Question 24

Multiple Choice Question

Which document commonly accompanies finished products during dispatch?

- A. Quality Certificate ✓
- B. Attendance Register
- C. Training Record
- D. Maintenance Log

Correct Answer: Quality Certificate

Explanation: Quality certificates confirm that products meet the required standards.

Question 25

Multiple Choice Question

Which sequence correctly represents the manufacturing journey?

- A. Raw Material → Scrap Yard → EAF → AOD → LRF → CCM → Hot Rolling → Cold Rolling → Annealing → Pickling → Grinding → Quality → Warehouse → Dispatch ✓
- B. Warehouse → Raw Material → EAF → Dispatch
- C. CCM → Raw Material → Grinding → Dispatch
- D. Hot Rolling → Scrap Yard → Cold Rolling → Warehouse

Correct Answer: Raw Material → Scrap Yard → EAF → AOD → LRF → CCM → Hot Rolling → Cold Rolling → Annealing → Pickling → Grinding → Quality → Warehouse → Dispatch

Explanation: This is the complete manufacturing workflow from raw materials to customer dispatch.

Manufacturing Journey - Set 2

Question 1

Multiple Choice Question

Which raw material provides chromium in stainless steel production?

- A. Limestone
- B. Ferro Chromium ✓
- C. Coal
- D. Copper

Correct Answer: Ferro Chromium

Explanation: Ferro Chromium provides chromium, which gives stainless steel its corrosion resistance.

Question 2

Multiple Choice Question

Which area receives, inspects and segregates scrap before melting?

- A. Warehouse
- B. Scrap Yard ✓
- C. Dispatch
- D. Cold Rolling Mill

Correct Answer: Scrap Yard

Explanation: The Scrap Yard prepares scrap before charging it into the EAF.

Question 3

Multiple Choice Question

Which component produces the electric arc inside an Electric Arc Furnace?

- A. Copper Rod
- B. Graphite Electrode ✓
- C. Cooling Pipe
- D. Steel Plate

Correct Answer: Graphite Electrode

Explanation: Graphite electrodes generate the electric arc required for melting.

Question 4

Multiple Choice Question

What gas is mainly mixed with oxygen during the AOD process?

- A. Nitrogen
- B. Argon ✓
- C. Hydrogen
- D. Helium

Correct Answer: Argon

Explanation: Argon helps reduce chromium oxidation during decarburization.

Question 5

Multiple Choice Question

Which process immediately follows the AOD converter?

- A. Cold Rolling
- B. LRF ✓
- C. Warehouse
- D. Grinding

Correct Answer: LRF

Explanation: The molten steel is transferred to the Ladle Refining Furnace.

Question 6

Multiple Choice Question

What is the purpose of the tundish in Continuous Casting?

- A. Store finished coils
- B. Distribute molten steel to the mould ✓
- C. Cool slabs
- D. Measure thickness

Correct Answer: Distribute molten steel to the mould

Explanation: The tundish acts as an intermediate reservoir before casting.

Question 7

Multiple Choice Question

What is the first operation in Hot Rolling?

- A. Grinding
- B. Reheating the slab ✓
- C. Packaging
- D. Pickling

Correct Answer: Reheating the slab

Explanation: Slabs are reheated before entering the rolling mill.

Question 8

Multiple Choice Question

Cold Rolling is normally carried out at:

- A. Room Temperature ✓
- B. 1000°C
- C. 1500°C
- D. 800°C

Correct Answer: Room Temperature

Explanation: Cold Rolling is performed without reheating the material.

Question 9

Multiple Choice Question

Which process restores ductility after Cold Rolling?

- A. Annealing ✓
- B. Grinding
- C. Dispatch
- D. Warehouse

Correct Answer: Annealing

Explanation: Annealing relieves internal stresses and restores ductility.

Question 10

Multiple Choice Question

Which process improves corrosion resistance by removing oxide scale?

- A. Pickling ✓
- B. Warehouse
- C. CCM
- D. Scrap Yard

Correct Answer: Pickling

Explanation: Pickling removes oxide scales formed during heat treatment.

Question 11

True / False Question

Molten steel is transferred from EAF directly to CCM.

Correct Answer: False

Explanation: It passes through AOD and LRF before Continuous Casting.

Question 12

True / False Question

Warehouse operations include inventory management.

Correct Answer: True

Explanation: Inventory management is one of the warehouse's primary responsibilities.

Question 13

True / False Question

Quality inspection takes place throughout manufacturing.

Correct Answer: True

Explanation: Quality checks are performed at every important stage.

Question 14

True / False Question

The LRF is used for secondary refining of molten steel.

Correct Answer: True

Explanation: The Ladle Refining Furnace performs secondary refining and temperature adjustment.

Question 15

True / False Question

Dispatch takes place before Quality Inspection.

Correct Answer: False

Explanation: Finished products are inspected before they are dispatched.

Question 16

Short Answer Question

What is the main purpose of the Scrap Yard?

Model Answer: The Scrap Yard receives, inspects, segregates and prepares scrap for charging into the Electric Arc Furnace.

Key points to include: segregation, inspection, scrap, storage, charging

Question 17

Short Answer Question

Why is Argon used in the AOD process?

Model Answer: Argon reduces chromium oxidation while helping remove carbon during refining.

Key points to include: chromium, oxidation, refining, gas

Question 18

Short Answer Question

What is the function of the Ladle Refining Furnace (LRF)?

Model Answer: The LRF adjusts temperature, refines molten steel and corrects chemical composition.

Key points to include: secondary refining, temperature, alloy, composition

Question 19

Short Answer Question

Why is Pickling performed after Annealing?

Model Answer: Pickling removes oxide scale formed during annealing and restores a clean corrosion-resistant surface.

Key points to include: oxide scale, acid, surface, corrosion resistance

Question 20

Short Answer Question

Mention any two responsibilities of the Warehouse department.

Model Answer: Warehouse stores materials safely, manages inventory, issues materials and prepares finished goods for dispatch.

Key points to include: storage, inventory, material handling, dispatch

Question 21

Multiple Choice Question

Which equipment continuously withdraws the slab during Continuous Casting?

- A. Withdrawal Rollers ✓
- B. Grinding Wheel

- C. Electrodes
- D. Coiler

Correct Answer: Withdrawal Rollers

Explanation: Withdrawal rollers continuously pull the solidifying slab from the mould.

Question 22

Multiple Choice Question

Which process is primarily responsible for improving surface finish and dimensional accuracy?

- A. Cold Rolling ✓
- B. Steel Making
- C. Scrap Yard
- D. Warehouse

Correct Answer: Cold Rolling

Explanation: Cold Rolling produces accurate thickness and an improved surface finish.

Question 23

Multiple Choice Question

Which inspection is commonly performed after Grinding and Finishing?

- A. Surface Finish Inspection ✓
- B. Fuel Inspection
- C. Payroll Verification
- D. Attendance Check

Correct Answer: Surface Finish Inspection

Explanation: Grinding is followed by surface quality inspection.

Question 24

Multiple Choice Question

Which document confirms that the finished product meets required specifications?

- A. Quality Certificate ✓
- B. Attendance Sheet
- C. Leave Application
- D. Purchase Order

Correct Answer: Quality Certificate

Explanation: The Quality Certificate confirms compliance with quality requirements.

Question 25

Multiple Choice Question

Which sequence correctly represents the steelmaking stages before rolling?

- A. EAF → AOD → LRF → CCM ✓
- B. LRF → EAF → CCM → AOD
- C. CCM → LRF → EAF → AOD
- D. AOD → CCM → LRF → EAF

Correct Answer: EAF → AOD → LRF → CCM

Explanation: Molten steel is melted in the EAF, refined in the AOD and LRF, then cast in the CCM.

Manufacturing Journey - Set 3

Question 1

Multiple Choice Question

Which alloying element gives stainless steel its corrosion resistance?

- A. Copper
- B. Chromium ✓
- C. Aluminium
- D. Lead

Correct Answer: Chromium

Explanation: Chromium forms a passive oxide layer that protects stainless steel from corrosion.

Question 2

Multiple Choice Question

Before charging scrap into the EAF, it is prepared in the:

- A. Warehouse
- B. Scrap Yard ✓
- C. Dispatch Section
- D. Grinding Shop

Correct Answer: Scrap Yard

Explanation: The Scrap Yard prepares and segregates scrap before melting.

Question 3

Multiple Choice Question

Which furnace performs the initial melting of scrap?

- A. Annealing Furnace
- B. Electric Arc Furnace ✓
- C. Ladle Refining Furnace
- D. Reheating Furnace

Correct Answer: Electric Arc Furnace

Explanation: The Electric Arc Furnace melts the scrap using electric arcs.

Question 4

Multiple Choice Question

Which process is mainly responsible for reducing carbon content in molten steel?

- A. Grinding
- B. AOD ✓
- C. Warehouse
- D. Dispatch

Correct Answer: AOD

Explanation: The AOD process removes carbon while preserving chromium.

Question 5

Multiple Choice Question

Which unit adjusts the final chemical composition before casting?

- A. LRF ✓
- B. Scrap Yard
- C. Cold Rolling
- D. Grinding

Correct Answer: LRF

Explanation: LRF performs secondary refining and composition adjustment.

Question 6

Multiple Choice Question

The output of the Continuous Casting Machine is:

- A. Finished Sheets
- B. Steel Slabs ✓
- C. Steel Pipes
- D. Steel Powder

Correct Answer: Steel Slabs

Explanation: CCM continuously casts molten steel into slabs.

Question 7

Multiple Choice Question

Which rolling process is performed first?

- A. Cold Rolling
- B. Hot Rolling ✓
- C. Grinding
- D. Pickling

Correct Answer: Hot Rolling

Explanation: Hot Rolling is performed before Cold Rolling.

Question 8

Multiple Choice Question

Which process improves the dimensional accuracy of stainless steel?

- A. Cold Rolling ✓
- B. CCM
- C. Warehouse
- D. Scrap Yard

Correct Answer: Cold Rolling

Explanation: Cold Rolling provides better dimensional accuracy and surface finish.

Question 9

Multiple Choice Question

Annealing mainly restores:

- A. Color
- B. Ductility ✓
- C. Packaging
- D. Weight

Correct Answer: Ductility

Explanation: Annealing restores ductility and relieves internal stress.

Question 10

Multiple Choice Question

Which process prepares stainless steel for its final surface finish?

- A. Grinding ✓
- B. Scrap Yard
- C. LRF
- D. CCM

Correct Answer: Grinding

Explanation: Grinding removes imperfections and improves surface finish.

Question 11

True / False Question

The Electric Arc Furnace uses graphite electrodes for melting.

Correct Answer: True

Explanation: Graphite electrodes generate electric arcs that melt the scrap.

Question 12

True / False Question

Cold Rolling increases dimensional accuracy.

Correct Answer: True

Explanation: Cold Rolling improves both dimensional accuracy and surface finish.

Question 13

True / False Question

Warehouse operations begin before steel making.

Correct Answer: False

Explanation: Warehouse activities mainly involve storing raw materials, semi-finished and finished products after manufacturing stages.

Question 14

True / False Question

Pickling removes oxide scale formed during heat treatment.

Correct Answer: True

Explanation: Pickling uses acid treatment to remove oxide scale and restore a clean surface.

Question 15

True / False Question

Dispatch is responsible for transporting finished products to customers.

Correct Answer: True

Explanation: Dispatch is the final stage where finished goods are prepared and shipped.

Question 16

Short Answer Question

What is the purpose of the Electric Arc Furnace (EAF) in stainless steel manufacturing?

Model Answer: The Electric Arc Furnace melts stainless steel scrap and alloy materials to produce molten steel for further refining.

Key points to include: melting, scrap, molten steel, electric arc

Question 17

Short Answer Question

Why is the Ladle Refining Furnace (LRF) important?

Model Answer: The LRF performs secondary refining, adjusts temperature, and achieves the required chemical composition.

Key points to include: secondary refining, temperature, composition, alloy

Question 18

Short Answer Question

What is the purpose of Hot Rolling?

Model Answer: Hot Rolling reduces slab thickness and converts slabs into hot rolled coils or plates.

Key points to include: reduce thickness, slab, coil, rolling

Question 19

Short Answer Question

Why is Grinding performed before final inspection?

Model Answer: Grinding removes surface defects and improves the surface finish before quality inspection.

Key points to include: surface finish, defects, appearance, quality

Question 20

Short Answer Question

Mention any two documents commonly prepared during Dispatch.

Model Answer: Examples include Invoice, Delivery Challan, Packing List, Quality Certificate, and E-Way Bill.

Key points to include: invoice, delivery challan, packing list, quality certificate, e-way bill

Question 21

Multiple Choice Question

Which process directly follows Cold Rolling?

- A. Annealing ✓
- B. Dispatch
- C. Warehouse
- D. Scrap Yard

Correct Answer: Annealing

Explanation: Annealing is carried out after Cold Rolling to restore ductility.

Question 22

Multiple Choice Question

Which department verifies the final product before it is released for dispatch?

- A. Quality ✓
- B. HR
- C. Finance
- D. Procurement

Correct Answer: Quality

Explanation: The Quality department performs the final inspection before dispatch.

Question 23

Multiple Choice Question

Which equipment is commonly used to move heavy coils inside the warehouse?

- A. Forklift ✓
- B. Laptop
- C. Micrometer
- D. Spectrometer

Correct Answer: Forklift

Explanation: Forklifts are commonly used for safe material handling inside warehouses.

Question 24

Multiple Choice Question

Which practice helps ensure accurate inventory management?

- A. FIFO ✓
- B. Skipping inspections
- C. Ignoring labels
- D. Random storage

Correct Answer: FIFO

Explanation: FIFO (First In, First Out) helps maintain inventory accuracy and reduces material aging.

Question 25

Multiple Choice Question

Which manufacturing stage comes immediately before Dispatch?

- A. Warehouse ✓
- B. Cold Rolling
- C. Electric Arc Furnace

D. Scrap Yard

Correct Answer: Warehouse

Explanation: After quality inspection, finished products are stored in the Warehouse before being dispatched to customers.
